

EXCLUSIVELY VET ONLY

# DIB-V®

At joining, it pays to plan.

A high 6 week in calf rate requires a strong conception rate.

DIB-V® provides dairy herds with the right amount of progesterone for oestrus synchronisation in both AI and ET programs. The easy to use, single use device has been designed for optimum cow comfort, high retention rates and improved farm biosecurity.

The DIB-V® 1g progesterone device is part of the CattlePlan range of products and services.
